About GN-Networks Logistics - Technologies

GN-Networks Logistics - Technologies is a software development, services solution application provider, and consulting company. Our open architecture, multifunction system solutions, and application concepts are designed for businesses and their service users in an assortment of market sectors.

We have developed and assembled a group of vertical portals known as the PSstar System. When grouped with an advanced set of marketing strategies, the PSstar System delivers the technical and marketing capability needed by businesses targeting the internet.

Our Mission
Our mission is to advance the goals and objectives of our business clients by providing impeccable service that delights your customers. We believe our products, services, and strategic development will help us achieve our mission.

Our Commitments
- Improve your customers' satisfaction
- Increase your customer base
- Reduce the cost of meeting your customers' service needs
- Ensure that you and your customers enjoy the benefits and efficiency that our products and services offer
- Increase your sales and improve your bottom line

About Our PSstar System
Our PSstar System solutions are a unique blend of solutions that use strategies with technology. Allowing for a full set of vertical portals that can be customized to meet clients' needs. Our solutions help businesses to better disperse their services to their online consumers.

PSstar System Uniqueness
The PSstar System is an open system with a multifunction program that provides services to a variety of business sectors. The POS system is the dominant feature. It works as a browser online and a desktop system that allows service transactions to be setup and paid for before they are provided to the consumer.

Support
Our system supports businesses in areas that include:

- Workflow management process
- Service delivery system to consumers
- Back office operations support
- Development of analysis reports
- Accurate business forecast using analysis reports

GN-Networks Consulting

GN-Networks Logistics - Technologies provides consulting services to companies for their business services solution needs using GN-Networks and PSstar System solutions and technology.

Our technology system, products, and services are made available to our business clients through our consultation services. Those services are business analysis, strategic development planning, and business relationship engagement.

We Connect with companies interested in using our service(s) or any of our PSstar System technologies and business solutions either as a standard development product or as a customized offering.

Business Solutions and Services Applications

The PSstar business applications are as following:

- PSstar Multi-Portal System uses the web to provide customized business solutions
- PS Reservation Plus Services for hospitality services providers
- PSstar Convention Services Management System - a service solution for convention centers and event planners
- PSstar Concierge Services System for hospitality centers and service providers
- PSstar Posh Vision Enterprise Solutions - a web-based template enterprises suite that provides e-commerce services
- PSstar Marketing Services

Convention Management System

Our Convention Services Management System supports convention centers and convention service providers. The Convention Services Management System provides a service plan to convention services setup for businesses and others who need convention centers and related services for their organizations and business.

The Convention Services Management System allows those who need a convention service to thoroughly plan every aspect of their conventions, such as locations and logistics, as well as other corporate or individual needs, such as hotels, restaurants, transportation and other convention related services.
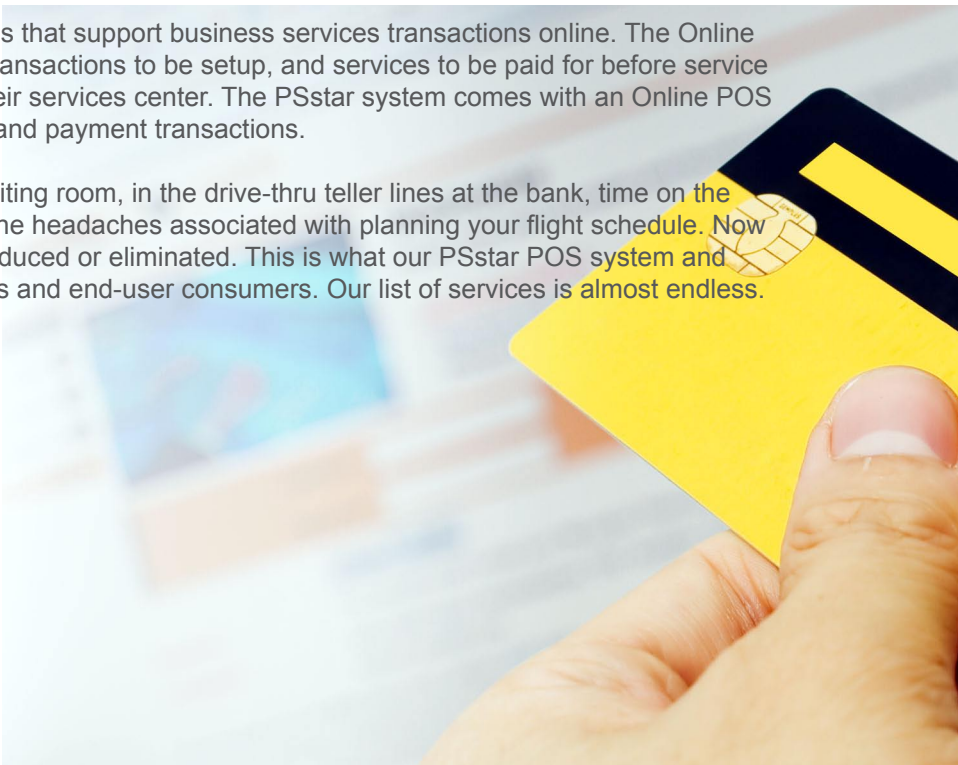

Online Point Of Sales System Solution

POS systems are one of the predominant features that support business services transactions online. The Online POS System will allow services to be planned, transactions to be setup, and services to be paid for before service are provided or before the customer arrives at their services center. The PSstar system comes with an Online POS system, which will support variety of businesses and payment transactions.

Think of the endless hours spent in a doctor's waiting room, in the drive-thru teller lines at the bank, time on the phone listening to voice response prompts, and the headaches associated with planning your flight schedule. Now IMAGINE these time takers being dramatically reduced or eliminated. This is what our PSstar POS system and service browser can accomplish for your business and end-user consumers. Our list of services is almost endless.

The PSstar System POS solutions comes with features that include:

• Appointment Setup
• Service Payment
• Customer's Services Planning
• Service Selection
• Service Transaction Processing
• Selected Service Review
• Service Planning Confirmation
• Customer Service Records
• Service Provider Back Office
  Service Browsing Support
